

Sunnytek offers a new generation of solar panels with thin film design and special colours and patterns. There are standard models and we can also make what is needed to any colour and pattern. We also offer a mosaic design where a pattern or image like a Logo can be spread out over many panels. This opens up a new design for facade designs. Send us a drawing and we can make this design !

Panels are thin film designs and normally laminated to resist demands of wall glass panels. One model is certified for Taiwan skyscrapers and typhoon classification.

Panels can be off panels and then we offer sealed mount to get all wage resistant

Panels can be wall panels for office buildings etc.

Panels can be semitransparent and act as windows for wall behind

Panels can also be floor panels that are strong for applications like restaurants etc.

The solar panels can be up to 2000 mm x 1350mm in area with powers up to 350 W.

### High Performance Cd-Free CIGS Thin Film Modules

#### MAX SYSTEM 1500V CIGS MODULES

##### CIGS Competitive Advantages

- PID- free, LID-free
- No microcrack problem
- Less solder joints than C-Si
- No glint/glare problem
- Low shadow impact
- RoHS compliant
- Free of Lead, Cadmium, Tellurium, Arsenic
